

# IN TREATMENT CARE QUESTIONS

## YOUNG ADULT CANCER

How do you feel about today's appointment?

Which drugs and therapies will be used today?  
What are the most common short and long-term effects of this treatments protocol?

Do you have resources available specific to adolescents and young adults like a patient navigator or age-appropriate setting?

How can I best prepare for treatment? What should I do immediately after treatment?

Besides the treatment protocol, what other medicines and therapies will you use?

Are there complimentary medicines I can take advantage or avoid?

How will I/you know if something is a common side effect or a warning sign for a larger problem?

How will you work with my caregivers and support team? Who makes decisions if I am not coherent or able to discuss my wishes with you?

Who should I call if I need to discuss symptoms while I'm home?
